Local/Distant	Insert relevant sites		
Summary of treatment and relevant dates	State what radiotherapy has been given including dates and for how long if information not already in place		

Comments:
Add in patient specific information around side-effects experienced from radiotherapy
<p>The following to be used for all patients UNLESS YOU STATE OTHERWISE:</p> <p>Possible treatment consequences and/ or late effects:</p> <p>Acute Effects (During or shortly after radiotherapy)</p> <ul style="list-style-type: none"> Pain in the affected area – this often becomes worse 24 – 48 hours post treatment due to an inflammatory response in the tissues being treated. Regular analgesia is advised. When effective most patients get relief of their pain within 2 – 4 weeks, but it is important to continue taking analgesia until pain settles Skin irritation - Skin in the treatment area may become pink (erythematous) following completion of treatment. Moisturising cream to be applied twice daily. Pruritus - 1% Hydrocortisone topical application twice daily (for up to a week). Discontinue use of creams if skin becomes broken Fatigue – moderate daily exercise within the limits of mobility should be encouraged. Avoid any exercise which is high impact e.g. running or exercise which might cause a fall <p>Other side effects depend on the area which has been treated</p> <ul style="list-style-type: none"> Thoracic or lumbar spine – nausea and vomiting. Anti-emetics may be helpful Pelvis – diarrhoea. Loperamide can be used Cervical spine – soreness and discomfort with swallowing. Soluble analgesics can be helpful <p>Please use the link to access and order the Macmillan MSCC information/ alert card if appropriate</p>
